

EGG & VINEGAR

SUPERNOVA
DALHOUSIE UNIVERSITY | HALIFAX, NOVA SCOTIA

**WATCH A CHEMICAL REACTION TAKE PLACE
RIGHT BEFORE YOUR EYES!**

MATERIALS

3

- 500ml of vinegar
- 1 raw egg
- 1 glass jar

**15 MINS X2
4 DAYS APART**

PROCEDURE

Step 1

Fill the jar with vinegar.

Step 2

Carefully place egg in the jar.

Step 3

Leave jar off to the side for 24 hours.

Step 4

Refill the cup with vinegar.

Step 5

Take the egg out of the jar 4 days later and rinse it off carefully.

Step 6

Observe the naked egg!

**CAN YOU THINK OF ANY OTHER EXAMPLES OF
CHEMICAL REACTIONS?**

PURPOSE & SCIENCE OUTCOMES

- A chemical reaction is an interaction between molecules.
- Acetic acid in vinegar dissolving the shell of an egg by eating away the calcium carbonate in the egg shell.
- The bubbles are indication of a chemical reaction!
